

METHOD AND SYSTEM FOR REMOTE CONTROL AND INTERACTION  
WITH  
A RUN TIME ENVIRONMENT COMPONENT

10 ABSTRACT OF THE DISCLOSURE

15 A user device, a first computer system, includes a  
lightweight component that receives user input actions  
for a runtime environment component that is executing on  
a second computer system. The lightweight component  
sends a remote input action command to a user interface  
infrastructure that is executing on the second computer  
system. In response to the remote input action command,  
the user interface infrastructure sends a local input  
20 action command to the runtime environment component that  
processes the command, and issues a local output command  
to the user interface infrastructure that in turn sends  
a remote output command to the lightweight component on  
the user device. In response to the remote output  
25 command, the lightweight component causes an output on  
the user device.
